**Name of Organizing Department or Committee:** Department of Physics

**Name of the activity:** NEP based Demonstration Activity for B.Sc.H.Sc. Sem-III

**Date of Activity:** 08/08/2023

**Place of Activity:** Physics lab

**Name of Guest Speaker/s or Judge/s or Chief Guest/s if any:** NA

**Activity with newspaper coverage if any:** No

**Number of Participants:** 10 B.Sc.H.Sc. Sem-III

**Name of the Teacher In-charge / Convener:** Dr. Anagha A. Pathak

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

The transformer turns ratio (TTR), as implied by its name, is defined solely by the relationship between the physical number of turns of a pair of windings and we can calculate it with equation (A).

$$TTR = N_p / N_s \dots\dots\dots(A)$$

Where,  $N_p$  is the number of turns in the primary winding and,

$N_s$  is the number of turns in the secondary winding.

Both  $N_p$  and  $N_s$  are defined early in the design process of a transformer, and in general, these are quantities not known by the transformer owner or the individuals running the maintenance tests.

When performing the TTR test, the values used to calculate the transformer name plate ratio (TNR) are taken from the transformer nameplate, and the numbers used are the line-to-line voltages for each of the windings pertaining to the measurement.

$$TTR = N_p/N_s \approx V_p/V_s \dots\dots\dots(B)$$

With the help of turns ratio type of the transformer can be identified.

**OUTCOME of the Activity with respect to academics:**

A temperature gradient is generated by locally heating a sheet metal part with a laser. The increased temperature leads to a thermal expansion of the heated area. The surrounding structure counteracts the thermal expansion.

When we heat metal rod from one side and its temperature noted at different locations. Students observed that there is different temperature at different locations. This experiment was repeated a number of times for different materials.

Date:04/09/2023

**Name of Organizing Department or Committee:** Department of Physics

**Name of the activity:** NEP based Demonstration Activity for B.Sc.Home Science Sem-I

**Unit : I**

**Suggested CRITERION point if any:** Restricted to RTMNU BSc physics syllabus.

**Date of Activity:** 04/09/2023

**Place of Activity:** Home Science Class room

**Name of Guest Speaker/s or Judge/s or Chief Guest/s if any:** NA

**Title of the Activity:** Demonstration least count measurement of instruments

**Activity with newspaper coverage if any:** No

**Number of Participants:** BSc Home Science Sem-I Students

**Name of the Teacher In-charge / Convener:** Mr. Nishant Zode

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

In this activity BSc Home Science Sem - I students learn about how to measure the least count of different instruments e.g. Vernier Callipers

The least count is crucial because it determines the precision or accuracy of the measurements taken using the instrument. Instruments with smaller least counts are capable of making more precise measurements.

To take a measurement, students have to add the main scale reading to the Vernier scale reading multiplied by the least count. For example, if the main scale reading is 3 mm and the Vernier scale reading is 0.6 mm, with a least count of 0.1 mm, then the measurement would be  $3 \text{ mm} + (0.6 \text{ mm} * 0.1 \text{ mm}) = 3.06 \text{ mm}$ .

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

This demonstration provided a unique opportunity to B.Sc. Semester-V students to learn how to calculate the most probable value and average value of any quantity. Also, what is the main difference between most probable value and average value.

1) In this activity, first of all, we divided group of student whose height belongs to 151-160, 161-170, 171-180, and 180-190 centimetres.

2) Now, measured the height of each student with the help of scale in centimeters. And record their height in table which made according to their height in centimeters.

3) Find most probable speed, we multiplied the value to particular height group and number

Of students belongs to that group. Similar process followed to all group and made its addition then divided it by total number of student. We got most probable value of height of students.

This demonstration helped students to understand the concept of most probable distribution.

**OUTCOME of the Activity with respect to academics:**

This demonstration provided a unique opportunity to B.Sc. Semester-III students to learn the phenomena of reflection, refraction of light.

- 1) In this activity, First we collected all those things like coin, cup, water, torch etc. which were required for performing this activity.
- 2) A coin kept in a cup & move away from it, coin seen at particular distance.
- 3) But, we moved away from it, coin couldn't be seen because light not bent at corner. Only reflection phenomenon occurred.
- 4) Now, add water on it and move away from it, coin couldn't be seen.
- 5) when torch light i. e. incident light fall on it, two medium generated, air medium and water medium, light rays travelled from both medium.
- 6) Light rays enter water through air, it bends & refracts. This demonstration helped students to understand the concept of refraction.

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

This demonstration provided a unique opportunity to BSc Sem- I students to learn the about how to design and construct atomizer. In this activity students were engaged in process of learning how the atomizer spray has been made.

A spray nozzle or atomizer is a device that facilitates the dispersion of a liquid by the formation of a spray. The production of a spray requires the fragmentation of liquid structures, such as liquid sheets or ligaments, into droplets, often by using kinetic energy to overcome the cost of creating additional surface area. A wide variety of spray nozzles exist, that make use of one or multiple liquid breakup mechanisms, which can be divided into three categories: liquid sheet breakup, jets and capillary waves. Spray nozzles are of great importance for many applications, where the spray nozzle is designed to have the right spray characteristics.

Spray nozzles can have one or more outlets; a multiple outlet nozzle is known as a compound nozzle. Multiple outlets on nozzles are present on spray balls, which have been used in the brewing industry for many years for cleaning casks and kegs. Spray nozzles range from heavy duty industrial uses to light duty spray cans or spray bottles.

**Unit : II**

**Suggested CRITERION point if any:** Restricted to RTMNU BSc physics syllabus.

**Date of Activity:** 11/09/2023

**Place of Activity:** Home Science Class room

**Name of Guest Speaker/s or Judge/s or Chief Guest/s if any:** NA

**Title of the Activity:** Demonstration on understanding derived quantities.

**Activity with newspaper coverage if any:** No

**Number of Participants:** BSc Home Science Sem-I Students

**Name of the Teacher In-charge / Convener:** Mr. Nishant Zode

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

In this activity BSc Home Science Sem - I students learn about how to measure and understand different derived quantities.(e.g. velocity, density)

**Introduction and Conceptual Overview:** Begin by explaining the concept of derived quantities, which derived from fundamental quantities through mathematical combinations. Examples: velocity (derived from distance and time), density (derived from mass and volume).

**Demonstration 1: Velocity Calculation:**

**Materials Needed:** Stopwatch, measuring tape, and a marker.

**Procedure:** Students were ask mark a starting point and an ending point about 10 meters apart.

Then again a student ask to walk or run from the starting point to the ending point while another student times the movement. Measurement of the time taken and the distance covered. And finally students calculated the velocity using the formula  $Velocity = distance/time$ .

**Demonstration 2: Density Measurement:** **Materials Needed:** Balance, graduated cylinder, water, and objects of different masses and volumes.

**Procedure:** Students were ask to measure the mass of an object using the balance. Then volume of the same object by immersing it in the graduated cylinder filled with water and noting the volume change. After this calculation of the density being done using the formula  $Density = mass/volume$ . This process repeated the with objects of different masses and volumes to show that density remains constant for a given substance.

**Conclusion:** Throughout the demonstrations, students were encouraged to active participation, ask questions, and relate the concepts to real-world examples to enhance understanding. Encourage students to think critically about how derived quantities are applied in various scientific fields

**Name of Organizing Department or Committee:** Department of Physics

**Name of the activity:** NEP based Demonstration Activity for B.Sc. Sem-III

**Paper : I Unit : I**

**Suggested CRITERION point if any:** Restricted to RTMNU BSc physics syllabus.

**Date of Activity:** 14/09/2023

**Place of Activity:** Room no. 004

**Name of Guest Speaker/s or Judge/s or Chief Guest/s if any:** NA

**Title of the Activity:** Demonstration Sound through stretched string

**Activity with newspaper coverage if any:** No

**Number of Participants:** BSc Sem-III Students

**Name of the Teacher In-charge / Convener:** Mr. Nishant Zode

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

In this very activity students of B.Sc. sem I student learn how the sound produced in stretched string. To demonstrate sound through a stretched string, we use a long piece of string or rope of few meters long tied between two sturdy supports without any slack. Then, weight attached to the center of the string. This helps maintain tension and promotes clearer vibrations. By plucking the string gently with finger or a pick. This action creates a disturbance in the string, causing it to vibrate. Students were ask to observe and listen to the sound produced by the vibrating string.

**OUTCOME of the Activity with respect to academics:**

These series of experiments, students have gained insights into the behaviour of charged objects and verified Coulomb's law. These foundational concepts are crucial for understanding more complex phenomenon in electromagnetism.

- Rub the balloon against human hair and observe its effect on paper pieces. When a balloon is rubbed against hair, electrons are transferred from hair to the balloon, giving the balloon a negative charge and hair a positive charge.
- Rub the plastic rod against cloth and glass rod against silk cloth. Similar the balloon experiment, rubbing a plastic rod cloth cause's electron to transfer from one material to the other, resulting one material becoming positively charged and other negatively charged.
- Use a pair of charged objects, such as balloons rubbed against different materials to create a static charge, and measure the force between them using sensitive balance device by varying the distance between the charges and the magnitude of the charges.

**Name of the Teacher In-charge / Convener:** Dr. Gaurav K. Sukhadeve

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

By engaging students in hands-on measurement, calculation, and analysis, this activity can enhance their understanding of surface area and its implications in the context of bulk materials versus nanoparticles.

Provide an overview of bulk materials and nanoparticles. Discuss the differences in size, structure, and surface area between the two. Emphasize that nanoparticles have a significantly higher surface area-to-volume ratio compared to bulk materials due to their smaller size and larger surface area.

Interpretation of the results: explanation of why nanoparticles exhibit significantly higher surface areas compared to bulk materials. Relevance of surface area differences in various applications, such as increased reactivity in catalysis or enhanced drug loading capacity in drug delivery systems.

**Name of Organizing Department or Committee:** Department of Physics

**Name of the activity:** NEP based Demonstration Activity for B.Sc.Home Science Sem-I

**Unit : III**

**Suggested CRITERION point if any:** Restricted to RTMNU BSc physics syllabus.

**Date of Activity:** 18/09/2023

**Place of Activity:** Home Science Class room

**Name of Guest Speaker/s or Judge/s or Chief Guest/s if any:** NA

**Title of the Activity:** Understanding static and dynamic friction

**Activity with newspaper coverage if any:** No

**Number of Participants:** BSc Home Science Sem-I Students

**Name of the Teacher In-charge / Convener:** Mr. Nishant Zode

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

In this session of BSc Home Science Sem - I students learn about the activity of understanding static and dynamic friction .

When students initially ask to move the object on rough surface, they realise that they working against static friction. Static friction is the force that resists the initial movement of two objects in contact with each other and at rest. It takes more force to overcome static friction because the microscopic irregularities between the surfaces are effectively "stuck" together. Once students overcome static friction and the object starts moving, they were working against dynamic friction (also called kinetic friction). Dynamic friction is the force that opposes the motion of two objects sliding against each other. It's usually less than static friction because once the object is in motion, the irregularities between the surfaces slide past each other more easily.

This demonstration illustrates the difference between static and dynamic friction and shows that it typically requires more force to overcome static friction and start an object moving than it does to keep it moving once it's in motion.

**OUTCOME of the Activity with respect to mission vision of the institute and or academics:**

Sustainable menstruation is about being mindful of the environmental impact of disposable sanitary products to reduce your personal waste that contributes to environmental degradation. Across our lifetime, we will each dispose of approximately 15,000 single-use plastic sanitary pads or tampons. For years, the way we manage our period has involved using plastic sanitary pads - which are terrible for the environment. The plastic in pads and tampons that you use today will still be sitting in landfill hundreds of years from now.

Sexual orientation and gender identity/expression are important aspects of a young person's identity. Understanding and expressing sexual orientation and gender and developing related identities are typical development tasks that vary across children and youth. For example, some youth may be unsure of their sexual orientation, whereas others have been clear about it since childhood and have expressed it since a young age. To create the awareness, the activity was conducted.

**OUTCOME of the Activity with respect to academics:**

This demonstration was done to show the students.

The de Broglie wavelength, which is the main wavelength could apply to a human, is given by Planck's steady separated by energy. A human with a mass of 70 kg and strolling at 2 m/s would have a wavelength of  $5 \times 10^{-36}$  m. That is not as much as the Planck length, which makes it practically negligible.

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

Humans can detect sounds in a frequency range from about 20 Hz to 20 kHz. allows one to identify and recognize objects in the world based on the sound they produce, and hearing makes communication using sound possible. Sound is derived from objects that vibrate producing pressure variations in a sound-transmitting medium, such as air. A pressure wave is propagated outward from the vibrating source. Thus, a sound wave propagating outward from a vibrating object can reach the eardrum of a listener causing the eardrum to vibrate and initiate the process of hearing. In this demonstration a mobile app was used to create low and high frequency sound and students were asked if they were able to hear the sound.

Activity Report

Date: 12/10/2023

Name of Organizing Department or Committee: Department of Physics

Name of the activity: NEP based Demonstration Activity for B.Sc. Sem-III

Paper : I Unit : II

Suggested CRITERION point if any: Restricted to RTMNU BSc physics syllabus.

Date of Activity: 12/10/2023

Place of Activity: Room no. 004

Name of Guest Speaker/s or Judge/s or Chief Guest/s if any: NA

Title of the Activity: Demonstration conversion of sound into electrical and sound energy

Activity with newspaper coverage if any: No

Number of Participants: BSc Sem-III Students

Name of the Teacher In-charge / Convener: Mr. Nishant Zode

Names of other Committee Members / Staff: N.A.

**OUTCOME of the Activity with respect to academics:**

In this activity students were introduced the how sound energy converted into electrical energy and then back into sound is a fundamental process in many modern technologies, particularly in microphones and speakers. This activity performed as follows.

**1. Sound into Electrical**

When sound waves hit the diaphragm of a microphone, it vibrates in response to the changes in air pressure caused by the sound waves. The microphone attached to the diaphragm is a coil of wire wrapped around a magnetic core. As the coil moves in the magnetic field, it generates a small electrical current proportional to the sound wave's amplitude and frequency.

**2. Electrical to Sound Energy (Speaker)**

The electrical signal representing the sound is sent to the speaker's voice coil, which is also a coil of wire wrapped around a magnetic core. When the electrical signal flows through the voice coil, it generates a magnetic field that interacts with the permanent magnet, causing the voice coil to move back and forth. The movement of the voice coil moves the attached diaphragm, creating changes in air pressure that mimic the original sound waves. These changes in air pressure are what we perceive as sound.

**Activity Report**

**Date:** 13/10/2023

**Name of Organizing Department or Committee:** Department of Physics

**Name of the activity:** NEP based Demonstration Activity for B.Sc. Sem-I

**Suggested CRITERION point if any:** Restricted to RTMNU BSc physics syllabus.

**Date of Activity:** 13/10/2023

**Place of Activity:** Room No. 005

**Name of Guest Speaker/s or Judge/s or Chief Guest/s if any:** NA

**Title of the Activity:** Dielectrics and surface area dependent capacitance

**Activity with newspaper coverage if any:** No

**Number of Participants:** 30+ BSc Sem-I Students

**Name of the Teacher In-charge / Convener:** Dr. Gaurav K. Sukhadeve

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

Through this experiment, we have observed the impact of dielectric materials on capacitance and the dependence of capacitance on the surface area of conductors. These findings contribute to a deeper understanding of capacitor behavior and the practical applications of dielectrics in electronic devices.

**Effect of Dielectrics on Capacitance:** Set up the parallel plate capacitor with air as the dielectric and measure the capacitance using the capacitance meter. Then, insert the dielectric material between the plate and measure the capacitance with the dielectric in place. Recorded values show that the insertion of a dielectric material between the plates enhances the capacitance due to the material's ability to store electric energy.

**Capacitance Dependence on Surface Area:** Set up the parallel plate capacitor with a fixed distance between plates. Measure the initial capacitance. Increase the surface area of one or both plates by attaching conductive sheets. Measure the new capacitance with the increased surface area. Capacitance is directly proportional to the surface area of the conductors and inversely proportional to the distance between them, as described by the formula  $C = \epsilon \frac{A}{d}$

Dielectrics play a crucial role in various electronic applications, including capacitors, by increasing their energy storage capacity.

**Activity Report**

**Date:** 17/10/2023

**Name of Organizing Department or Committee:** Department of Physics

**Name of the activity:** NEP based Demonstration Activity for B.Sc. Sem-V

**Suggested CRITERION point if any:** Restricted to RTMNU BSc physics syllabus.

**Date of Activity:** 17/10/2023

**Place of Activity:** Room No. 004

**Name of Guest Speaker/s or Judge/s or Chief Guest/s if any:** NA

**Title of the Activity:** Conceptual understanding of energy density using one dimensional box.

**Activity with newspaper coverage if any:** No

**Number of Participants:** 30+ BSc Sem-V Students

**Name of the Teacher In-charge / Convener:** Dr. Anagha A. Pathak

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

This demonstration was done to understanding of energy density using one dimensional box.

Dimensional Formula of Energy Density

The dimensional formula of energy density is given by,

$[M^1 L^{-1} T^{-2}]$

Where, M = Mass

L = Length

T = Time

Derivation

Energy Density = Energy  $\times$  [Volume]<sup>-1</sup> . . . (1)

Since, Energy = Force  $\times$  d = m  $\times$  a  $\times$  d

Therefore, the dimensions of energy =  $[M^1 L^2 T^{-2}]$  . . . (2)

And, the dimensional formula of volume =  $[M^0 L^3 T^0]$  . . . (3)

On substituting equation (2) and (3) in equation (1) we get,

Energy Density = Energy  $\times$  [Volume]<sup>-1</sup>

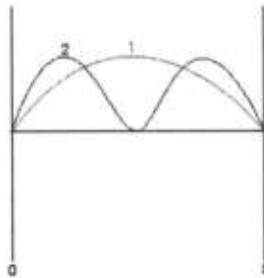

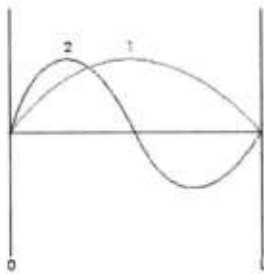

=  $[M^1 L^2 T^{-2}] \times [M^0 L^3 T^0]^{-1} = [M^1 L^{-1} T^{-2}]$ .

Therefore, the energy density is dimensionally represented as  $[M^1 L^{-1} T^{-2}]$ .

the complete, normalised wavefunction for the particle in a one-dimensional box is:

The wavefunctions and energies are labeled with a quantum number, n.

A quantum number is a number (an integer, or in some cases a half-integer) which labels the state of the system. For a particle in a box, there are an infinite number of acceptable wavefunctions (and thus an infinite numbers of states in which the system may found) , and the quantum number n specifies which state the system is in.

This is an example of the correspondence principle, which states that at high quantum numbers, quantum mechanical results reduce to classical mechanical ones. The probability distribution is decidedly nonuniform at low quantum numbers, but as  $n$  increases, the probability distribution does become more uniform. The distribution at high quantum numbers is consistent with the classical result that a particle moving between the two walls should, on average, spend equal amounts of time at all positions within the box.

**OUTCOME of the Activity with respect to academics:**

This demonstration provided a unique opportunity to B.Sc. Semester-III students to learn the phenomenon of polarized & unpolarised light.

- 1) In this activity, we gather all equipment or things which were essential for performing this activity.
- 2) First we took two filter papers & white light torch .Put ON torch.
- 3) When torch on, got full brightness. But when filter paper put in front of torch, the intensity of light decreases.
- 4) Filter paper acts like polaroid & convert unpolarised light into polarized light. This demonstration helped students to understand the concept of polariser and analyser.

**Place of Activity:** Room no. 004

**Title of the Activity:** Demonstration elastic collision on the basis of collision of same size pebbles

**Activity with newspaper coverage if any:** No **Number of Participants:** BSc Sem-I Students

**Name of the Teacher In-charge / Convener:** Mr. Nishant Zode

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

In this activity BSc Sem- I students were introduced to the most important physical event i.e. elastic collision by using same size pebbles collision .For this demonstration, imagine two identical pebbles moving towards each other along a straight line. Let's label these pebbles as A and B. For this demonstration, imagine two identical pebbles moving towards each other along a straight line. Let's label these pebbles as A and B.

**Initial Conditions:** Initially, pebble A moves towards pebble B with a certain velocity, and pebble B moves towards pebble A with the same velocity but in the opposite direction.

**Collision:** When the pebbles collide, several things happen: They exert forces on each other due to their interaction, causing each other to decelerate

1. During the collision, momentum is conserved. Momentum (p) is defined as the product of mass (m) and velocity (v):  $p = m \times v$ .

**Post-Collision Motion:** After the collision, the pebbles move away from each other. Due to the conservation of momentum, their final velocities will be such that the total momentum is still zero  
**Elastic Collision:** In an elastic collision, kinetic energy is also conserved. This means that the total kinetic energy of the system (the sum of the kinetic energies of both pebbles) before the collision is equal to the total kinetic energy after the collision. So the summary, during an elastic collision between two identical pebbles:

1. Momentum is conserved: The total momentum before the collision is equal to the total momentum after the collision. 2.

Kinetic energy is conserved: The total kinetic energy before the collision is equal to the total kinetic energy after the collision.

This demonstration illustrates the principles of elastic collisions, where objects conserve both momentum and kinetic energy during the collision process

**Name of the Teacher In-charge / Convener:** Mr. Nikhil Somkule

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

The P-type dopant, an electron acceptor, yields localized regions of positive charge known as holes. The majority carrier in a P-type semiconductor is the hole. While holes form at the trivalent dopant atom sites, they may move about the semiconductor bar. Holes traverse the crystal lattice. At the negative end of the bar, an electron from the battery combines with a hole, neutralizing it. This makes room for another hole to move in at the positive end of the bar toward the right. Keep in mind that as holes move left to right, that it is actually electrons moving in the opposite direction that is responsible for the apparent Hole movement. In this demonstration students were imagined as electrons and the class as a P-type Semiconductor, with this analogy concept of P-type Semiconductor was explained.

## **Theme**

The SWAYAM and MOOC Platform was developed indigenously by the All India Council for Technical Education (AICTE) in 2016. The aim of introduction of these platforms is to facilitate the hosting of online learning courses. These courses have to be designed by taking into account the convenience and academic interests of the learners who can gain access from any place and time according to their choice. The SWAYAM initiative was launched by the then Ministry of Human Resource Development (M.H.R.D.) (now Ministry of Education), Government of India under Digital India. The purpose is to make available a free platform for need-based courses. The National Education Policy 2020 aims to lay emphasis on online skill based courses which will contribute in enhancing the employability skills of the students across the nation. In many Higher Educational Institutions it has been witnessed that the teachers are desirous to design such courses which can be made available on SWAYAM and MOOC but proper guidance and directions regarding steps to be followed are lacking. With this objective in mind the workshop has been organized.

**Names of other Committee Members / Staff:** N.A.

**OUTCOME of the Activity with respect to academics:**

Voltage Regulators play a vital role in the DC power supplies for converting the AC signal into a regulated DC signal. Based on the requirement, we use the respective voltage regulator. We can convert the AC input into pulsating DC output using a rectifier. We use the voltage regulator to get the regulated DC output voltage. By using a DC supply, the ICs and most of the electronic devices can be operated. In this demonstration a IC, bread board and various components were used to teach the students about voltage regulation with the help of IC

**Activity Report**

Date: 21/10/2023

Name of Organizing Department or Committee: Department of Physics

Name of the activity: NEP based Demonstration Activity for B.Sc. Sem-I

Suggested CRITERION point if any: Restricted to RTMNU BSc physics syllabus.

Date of Activity: 21/10/2023

Place of Activity: Room No. 003

Name of Guest Speaker/s or Judge/s or Chief Guest/s if any: NA

Title of the Activity: Frequency dependence of transformer's efficiency.

Activity with newspaper coverage if any: No

Number of Participants: 30+ BSc Sem-I Students

Name of the Teacher In-charge / Convener: Dr. Anagha A. Pathak

Names of other Committee Members / Staff: N.A.

OUTCOME of the Activity with respect to academics:

It depends on what type or transformer you are referring.

In power transformer, the frequency is the same. The Volts/Current ration changes is a way the same power flows through (so  $V_{1I1} = V_{2I2}$ )

In electronic circuit coupling transformers, where signals with many frequency spectrum are applied, and where resistive and inductive phenomenon are both important, they tend to behave as hi-pass filters.

Let us see, Why as frequency increases the size of transformer decreases?

$E = 4.44 f N A B$ .

Where

$f$  = frequency,  $N$  = no. of turns

$A$  = area,  $B$  = flux density

Now, if frequency is increased keeping voltage and flux density constant, the area of core will decrease. Thus for the same power and voltage rating, a transformer operating at higher frequency will tend to be more compact as the core will be able to transfer more power without reaching saturation. But the core loss of transformer also increases with frequency.

According to Kirchoff's Current Law,

The total current entering a junction or a node is equal to the charge leaving the node as no charge is lost.

Put differently, the algebraic sum of every current entering and leaving the node has to be null.

This property of Kirchoff law is commonly called conservation of charge.

Name of the Teacher In-charge / Convener: Ms. Amrapali K. Meshram

Names of other Committee Members / Staff: N.A.

**OUTCOME of the Activity with respect to academics:**

This demonstration provided a unique opportunity to B.Sc. Semester-III students to learn the phenomenon of diffraction.

- 1) In this activity, first of all, we gathered all related things such as blades, potato etc.
- 2) Now , we took two blades which fixed in potato & put it in black background.
- 3) The gap between these blades much smaller than 1 mm.
- 4) Passed the laser beam on it arrangement through slit, diffraction pattern identified by alternate dark & bright bands. This demonstration helped students to understand the concept of optical phenomenon diffraction and how to covert ordinary light into diffracted pattern.

**OUTCOME of the Activity with respect to mission vision of the institute and or academics:**

Writing summaries is a very important but challenging skill. Summarizing is also a very common academic activity. Teachers and professors often require summary papers because when we clearly summarize a reading, we show that we have clearly interpreted and understood it. Writing a summary of a reading is also an excellent way to remember what we have read because it helps us to focus on the author's main ideas.

Pictures can be used to transform abstract ideas into realistic ideas. Pictures tend to engage both sides of the brain of learners, making it easier for them to remember and recall the visual stimuli provided. The use of images found in textbooks has great implications for teaching and learning the English language to non-natives. Students were asked to prepare Pictionary of the difficult words from the prose and share it with other students to understand the language in an easy manner.

# स्वतंत्रता संग्राम में जनजाति नायकों का योगदान

## Birsa Munda Study Centre, Nagpur

भारत का जनजाति समाज अपनी आध्यात्मिक परम्पराओं, विशिष्ट संस्कृति और श्रेष्ठ जीवन मूल्यों के साथ सदैव से भारतीय सभ्यता और संस्कृति का अभिन्न अंग रहा है। जब जब देश की सुरक्षा पर संकट आया जनजाति समाज ने अपने शौर्य और बलिदान से राष्ट्र की रक्षा में अपना महत्वपूर्ण योगदान दिया है। जब अंग्रेजी शासन ने भारत में अपने साम्राज्य का विस्तार करना प्रारम्भ किया तो उन्हें सबसे प्रारम्भिक और सशक्त चुनौती वनांचलों से ही मिलना प्रारम्भ हुई। जनजाति समाज ने कभी भी अंग्रेजों की दासता को स्वीकार नहीं किया और समय समय पर सशस्त्र विद्रोह और संघर्ष किया।

जनजाति नायकों के इस स्वर्णिम योगदान को आज की युवा पिढी स्मरण करे उस पर अध्ययन करे तथा गौरव की अनुभूति करे इस हेतु से उनके जीवन पर आधारित सामान्य ज्ञान प्रतियोगिता का आयोजन किया जा रहा है। इस प्रतियोगिता में सहभागी होकर हम भी उन्हें सच्ची श्रद्धांजली अर्पित करें।

**OUTCOME of the Activity with respect to mission vision of the institute and or academics:**

This is a student's centric activity. The part of universe which is under consideration is called as system. It is separated from other part of universe by specific boundaries. For example, a beaker in which some reaction is taking place is considered as a system. A system which can exchange energy as well as matter is called as open system. Whereas, a system which can exchange only energy not matter is called as closed system. This was easily visualized and understood by simple model.

**NEP Activity Report**

Date: 11/09/2023

Name of Organizing Department or Committee: Chemistry

Name of the activity: NEP Activity Report (Sem I, Paper II, Unit II)

Suggested CRITERION point if any: Criteria II

Date of Activity: 05-09-23

Place of Activity: Department of Chemistry

Name of Guest Speaker/s or Judge/s or Chief Guest/s if any- Nil

Title of the Activity: Identification of ideal and real gases.

Number of Participants: 40

Name of the Teacher In-charge / Convener: Dr. Mrs. Mrudul R. Keskar

Names of other Committee Members / Staff: Dr. Mrs. V. P. Meshram

OUTCOME of the Activity with respect to mission vision of the institute and or academics:

This is a student's centric activity. A gas that obeys various gas laws, ideal gas equation and confirms the assumptions of kinetic gas equation is called as ideal gas. Whereas, the other gases are called as real gases. However, no gas is an ideal. Almost all gases show significant deviation from ideal behaviour. By this activity, students are able to distinguish between ideal and real gas based on their properties.

Ideal Gas	Real Gas
1) Ideal gas obeys all the gas laws at all temperatures and pressures.	It obeys gas laws only at low pressure and high temperature.
2) Volume of molecule is negligible as compared to total volume of gas.	Volume of molecule is not negligible.
3) Attractive forces among the molecules do not exist.	Attractive forces among the molecules do exist particularly high pressure and low temperature.
4) It obeys the equation $PV = nRT$ .	It obeys Vander waal gas equation $\left(P + \frac{a}{V^2}\right)(V - nb) = nRT$
5) It is hypothetical.	All existing gases are real.
